As a world leader in 2D and 3D design, engineering, and entertainment software, Autodesk is providing the tools to help customers seize opportunities created by a new global business environment—a place where design has become the great competitive differentiator.

Technology, Design, and a Better Way

Since 1982, Autodesk has helped customers work more efficiently. Today, the Autodesk® portfolio of products is helping more than 10 million users around the world change the way they work altogether by enabling them to not only visualize their designs, but also predict the real-world performance of their ideas before they are built.

Whether the workflow involves Building Information Modeling in architecture, Digital Prototyping in manufacturing, or Digital Entertainment Creation in film, TV, and video games, Autodesk provides its customers with the broadest and deepest product portfolio. Our software enables a faster, more efficient and more iterative design process. More than providing just a competitive advantage, Autodesk provides the tools to help create a better-designed world.

Our Customers' Industries

Architecture, Engineering, and Construction

Building Information Modeling enables architects, engineers, builders, and owners to explore a project's key characteristics such as cost, scheduling, and environmental impact—before the project is actually built.

Automotive and Transportation

Automotive manufacturers and suppliers use the Autodesk solution for Digital Prototyping to design, model, test, and market products before building them.

Manufacturing

From industrial machinery to consumer products, the Autodesk solution for Digital Prototyping helps manufacturers accelerate product launches and optimize global supply chain collaboration by connecting all phases of the product development process without the need for a physical prototype.

Media and Entertainment

Whether in film, video games, or television, Autodesk provides digital artists and animators with technologies that are redefining digital content creation.

Utilities and Telecommunications

Utilities and telecommunications providers are using Autodesk infrastructure modeling tools to more easily handle customer requests, respond quickly to outages, and effectively provide information for reporting and decision analysis.

Government

Autodesk products and solutions enable both federal and state agencies to meet crucial objectives such as replacing or rebuilding an aging infrastructure while facing the challenges of shrinking budgets and changing regulations.

Designing What's Next

Spending nearly a half-billion dollars annually on research and development, Autodesk is committed to supporting the next generation of design professionals. With over 6,500 employees, 1,900 reseller partners, 3,400 development partners, and 1,900 Authorized Training Centers worldwide, Autodesk and its global network remain focused on technological innovation and the advantages it holds for our customers.
